The transport infrastructure in the strong economic metropolitan region of Stuttgart has been at full capacity for some time now. Frequent traffic jams on motorways and federal roads make planning difficult, and not only for freight transport. As a result, many representatives from logistics, industry and trade are calling for additional intermodal capacity. This should effectively ease congestion on the roads and reduce pollutant emissions.

With the above concerns at hand, New Silk Road Network's (NSRN) member IGS Schreiner GmbH shares a detailed overview of the IGS Logistics Group latest activities in Heilbronn as a case study with NSRN's readers. Considering that numerous world market leaders in their specific industry with strong business relations to China are located in the area of Heilbronn-Franken, the new IGS activities will surely be of interest for many NSRN members.
